SIGNAL PROCESSING

Cumulative contents of Volume 65

Volume 65, No. 1, February 1998

Papers

R. Ben-Mrad, S.D. Fassois and J.A. Levitt
A polynomial-algebraic method for non-stationary TARMA signal analysis – Part I: The method 1
R. Ben-Mrad, S.D. Fassois and J.A. Levitt
A polynomial-algebraic method for non-stationary TARMA signal analysis – Part II: Application to modeling and prediction of power consumption in automobile active suspension systems 21
R.N. Challa and S. Shamsunder
Passive near-field localization of multiple non-Gaussian sources in 3-D using cumulants 39
M.G. Strintzis and D. Tzovaras
Optimal pyramidal and subband decompositions for the hierarchical representation of vector valued signals 55
R. Srinivasan
Some results in importance sampling and an application to detection 73
T. Gänsler
A double-talk resistant subband echo canceller 89
W.-H. Lin, J.-S. Lee, C.-H. Chen and Y.-N. Sun
A new multiscale-based shape recognition method 103
E. Le Tavernier, P. Simard, M. Bulo and D. Boichu
La méthode de Higuchi pour la dimension fractale 115
A.D. Pluzhnikov, E.N. Pribludova and E.I. Torgushin
Woodward constant with space-distance resolution in radar scanning system 129
Z. Cao and X. Yu
Switching-based signal estimation with digital implementation 135

Fast communications

C. McCarley
VLSI 'HyperNeuron' for recognition of analog patterns 143
L. Galleani, L. Lo Presti and A. De Stefano
A method for nonlinear system classification in the time–frequency plane 147

Thesis alerts 155

Volume 65, No. 2, March 1998

Special Issue on Distribution Theory in Signal Processing
Guest Editors: J. Vidal and J.R. Fonollosa

J. Vidal and J.R. Fonollosa
Editoral – Distribution Theory in Signal Processing 159

Papers

D.R. Brillinger and R.A. Irizarry
An investigation of the second- and higher-order spectra of music 161

Elsevier Science B.V.

J.M. Goldberg and J.R. Fonollosa
Downlink beamforming for spatially distributed sources in cellular mobile communications 181
J. Ilow and D. Hatzinakos
Applications of the empirical characteristic function to estimation and detection problems 199
K.-S. Lii and T.-H. Tsou
Bispectral analysis of continuous-time processes under random sampling schemes 221
J.-Y. Tourneret
Statistical properties of line spectrum pairs 239
A. Swami and P. Tichavský
Strong ergodicity conditions for the nth-order moment (cumulant) of multiple sinusoids 257
A. Tesei and C.S. Regazzoni
HOS-based generalized noise pdf models for signal detection optimization 267
Y. Wang and G. Zhou
On the use of high-order ambiguity function for multi-component polynomial phase signals 283
V. Živojnović
Minimum Fisher information of moment-constrained distributions with application to robust blind identification 297
I.G. Zurbenko and P.S. Porter
Construction of high-resolution wavelets 315

Volume 65, No. 3, March 1998

Papers

A. Farina and M. Valeri
Recovery of antenna pattern loss in a search radar 329
S.-W. Hong, Y.-H. Chan and W.-C. Siu
A new approach for real-time reduction of blocking effect 337
A. Spinei, D. Pellerin and J. Hérault
Spatiotemporal energy-based method for velocity estimation 347
J. Razavilar, Y. Li and K.J. Ray Liu
A structured low-rank matrix pencil for spectral estimation and system identification 363
K.Y. Lee, S. McLaughlin and K. Shirai
Speech enhancement based on neural predictive hidden Markov model 373
G. Bi and Y. Chen
Fast generalized DFT and DHT algorithms 383
P.W.M. Tsang and W.T. Lee
An adaptive decimation and interpolation scheme for low complexity image compression 391

Fast communication

D.P. Ruiz, A. Gallego, M.C. Carrión and J. Porti
Order determination of MA models using third- and fourth-order statistics 403
